

Ph.D. in: Finance & Accounting Sciences

Specialties:

Accounting

Accounting and deep taxation

Finance and Insurance

Summary and objectives

After completing this Ph.D., the student will be able to gain mastery in accounting, auditing, and knowledge related directly and indirectly. This training will equip the student with the necessary skills to conduct academic research and teaching, as well as to engage in discussions pertaining to the field of accounting. The student will be able to improve their capabilities to discuss research topics and problems through lectures, workshops, forums, seminars, study days, and more. Furthermore, the doctoral dissertation prepared by the student will be the result of their years of training.

This Ph.D. will benefit anyone interested in the field of accounting and related fields such as auditing, administrative accounting, general accounting and accounting, since the proposed topics are considered modern research problems that are capable of providing new scientific contributions.
