

Master in speciality Poultry farming.

It is known that the breeding of poultry species is carried out in dilapidated buildings from the colonial period, they are of very modest size "maximum 2000 subjects installed" and whose investment in the control of the atmosphere is almost non-existent . This training allows the initiation of candidates to new poultry farming techniques, to produce food resources in the Algerian context, to evaluate the technical and economic performance of farms and from there, to train operational managers in the field.
